METEORITE MONITORING

Environmental Impact Policy

Revision 2 (Aug 2016)

Our Commitment

Meteorite Monitoring is an environmentally responsible company. Not only is our service a huge benefit to the environment when used effectively, but also we want to ensure our business operations have minimal impact on the environment.

Our commitment is to actively minimise and manage our direct and indirect impacts on the environment while also sharing our experience and knowledge with others to help them achieve the same ideal.

Our Actions

We recognise that the activities required to deliver our services have both a direct and indirect impact on the environment.

To support our commitment we will:

- Monitor and comply with all relevant environmental legislation and regulations.
- Maintain a culture of environmentalism with staff and contractors to embed environmental responsibility into the way we do business.
- Continue to advance the utility of our website platform, and provide freely, to greater help reduce our clients' environmental impact.
- Work with our suppliers to reduce our indirect environmental impacts and encourage a reduction in their own impact.

More specific actions we will take to help achieve our commitment:

- Eliminate avoidable business travel.
- Recycle all retired equipment with an approved recycler where possible.
- Purchase 100% green-power in any commercial premises used for all electricity consumption wherever it is available to us.
- Always be measuring, and then report on our environmental impact annually.
- Reduce our dependency/consumption on Lithium Metal batteries for long life on-site logger operations.

This policy will be reviewed annually in consultation with all staff, contractors and stakeholders.

Kind Regards,

Meteorite Monitoring
